L Lung	670
R Lung	570
Liver	1260
L kidney	140
R kidney	130
Spleen	90.

No ovaries located.

HERMAPHRODITISM

Person with both male & female glands, i.e. testicles & ovaries. ∴ theoretically a true hermaphrodite able to fertilize himself. Very rare. Most people referred to as hermaphrodites have deficiencies of external genital organs, i.e. seem to have both male penis & vagina but biologically really male or female. Corrective surgery to reshape genitals which match true biological sex to lead fairly normal sexual life.
