PREAMBLE
The body of the deceased was located lying face down on the pavement at the northern end of the wharf 4 machinery yard, bordering MONNS Park. The deceased was lying face down on the pavement on top of his right hand, his left hand being beside his side, his legs were outstretched. The deceased appeared to have insufficient injuries in comparison with the height that he fell from. Government Forensic Pathologist called to the scene.

SCENE
The deceased was lying on the ground face down, dressed in a pair of jag brand blue jeans, white T shirt and a further white t shirt, brown belt, and brown shoes, blue/green/red socks. In the back pocket of his jeans, right pocket there was a black leather wallet containing drivers licence, and student identification in the name of Scott Miller. There was no cash or credit cards in the wallet at all. His clothing was damp to touch and appeared water marked. It had rained previously the night before (Sunday 2/3/97). The outer shirt he was wearing was blood stained and this was inconsistent with the position of the deceased and the location.

EXAMINATION.

The right side of the deceased's face was visible and he had sustained a sever
bruise to his right eye. Also visible was his left wrist and there was an abrasion to his
left wrist on the inside of the wrist. The body of the deceased was at the base of a 7
metre rock escarpment (Monns Park) approximately 1 metres from the rocks. The
body was 3.7 metres east of a chain wire fence on the western side of teh
machinery storage yard. Photogrammetry attended later and surveyed the scene.
A stream of
blood ran from the head of the deceased across the storage area in a Southerly
direction. this blood was water diluted.
10.10am Dr Dufiou attended the scene and took an anal swab from the deceased
and then took an anal temperature from the deceased. At 10.20am the temperature
was 24.9 degress and the ambient temperature was 23.7 degrees. the rock face was
shading the body and Dr Dufiou used a .5 of a degree an hour and estimated time of
death as being 24 hours + - 6 hours. Post mortem lividity was consistent with the
position of the deceased and rigor mortis was well developed.

Then went to MONNS reserve and examined the area above the deceased's location. At the south western end of the reserve there was an area of bushland, approximately 3 metres wide. There was a chain wire fence at the end measuring 1.9 metres high. Over this fence there was a ledge, 1.8 metres below the bottom rail of the fence. This ledge was covered in ivy and leaf litter, there appeared to be no disturbances to the vegetation. I checked the stems of some of the ivy for broken leaves and treading and could see none. The ledge was 7 metres above the machinery store area where the deceased was located. Saw no signs of violence or blood in the area of the reserve. Returned to the body examination. Photogrammetry attended 12.05pm and scene surveyed. Deceased re rolled over and photographed, injuries still did not appear to be consistent with a fall from a height. Bagged the hands of the victim and left scene and attended City Morgue at 1.30pm Post Mortem at 3:10pm with Dr Duflou. Victim had sustained abrasions

Notes:
Further exhibits re the matter of the Death of Scott MILLER. At inquest the Deputy State Coroner Mr Abenathy found that the deceased, Scott MILLER was murdered. He had ordered that the T shirt that Scott MILLER was wearing be tested for different blood types other than that of the victim. I am aware this will require a substantial amount of work. Please take random samples for grouping paying particular attention to the back and top of the right shoulder. The victim was lying face down on the pavement with blood staining on his right shoulder and back. Any queries please contact me [REDACTED]
