

Conversation with Dr BRUCE re: unknown partial profile

File Number: 9
Product Type: TEXT DOCUMENTS:Investigators Note
Date of Note: 7 Jun 2016
Brief Description: About 10am on 07/06/2016 DSC CLANCY was at FASS for a presentation for SF POLWOOD 2. During this time DSC CLANCY spoke to Dr BRUCE in regards to SF SKARRATT and the male 'A' profile.

This profile has been located in a mixed profile was recovered from the DNA extract of the Condom from the rim of the toilet, which appears to be BRENNAN and male 'A'. A very partial profile of male 'A' determined from the mixture has not linked to anyone on the database. However, it is suitable for comparison with any suspect samples. Partial profiles have also been recovered from the YSL underpants which are consistent with the determined male 'A' profile.

DSC CLANCY asked Dr BRUCE if it was possible to find the ethnicity of male 'A' which Dr BRUCE stated was not possible due to the profile being only partial.

Dr BRUCE continued stating that the male 'A' profile has been checked with the NSW Database and the National Database. He is still waiting on the other results of the exhibits and will be in contact with the results soon.
