Brief Description: On 11/01/2017 DSC CLANCY had a telephone conversation with Dr David BRUCE from FASS (phone number [REDACTED]) in regards to the investigation into the death of Kenneth BRENNAN from 1995.

Further to this conversation on 13/01/2017 DSC CLANCY received an email from Dr BRUCE where he has attached a seven page document revealing the results obtained from the BRENNAN matter. This document is only for the items which were entered on EFIMS. There has been other recent testing carried out on stored DNA extracts under the case number FS95/444. This information can only be provided in a police report if a statement is requested via EFIMS or FIRM.

Of interest there are a few exhibits where the DNA profile matches Kenneth BRENNAN such as from strands of hair and fingernails. There is mixed DNA profile on the outside of a condom which is weak / complex. There is a partial DNA profile (male profile 'B') which could not have originated from Kenneth BRENNAN, **NP215** or **NP214** on the inside front area of the green underpants. This male profile 'B' is located on the upper left front of underpants.

Please find attached the seven page document.
