

## Contact with FASS - exploring the possibility of DNA profile

**File Number:** 63  
**Product Type:** TEXT DOCUMENTS:Investigators Note  
**Date of Note:** 15 Mar 2019  
**Brief Description:** On 05/03/2019 a report to INTERPOL was created however it was not submitted due to the possibility other testing might be able to produce a better outcome for this investigation.

On this date, DSC CLANCY contacted Dr BRUCE from FASS in relation to finding out what testing can be done on the unknown male profile which is located on the underpants and condom at the crime scene. This matter was discussed in details.

On 15/03/2019 DSC CLANCY and Dr BRUCE exchanged correspondence. Dr BRUCE has responded:

"Hi Rowena

I have reviewed the results in the case and think we are limited in what we can do to try to improve the profile. We have a partial nuclear and Y profile from the unknown individual as well as a mixture which appears to be the same individual and BRENNAN. I have requested an increase in the amplification cycles for two of these samples which may bring up some more information re the unknown DNA profile. We also have the option of using Y - Filer Plus to expand the Y profile. Currently the DNA profiles are not extensive enough for familial searching and I doubt there is enough sample to accommodate molecular phenotyping.

I will keep you informed on any progress on the additional testing.

Kind Regards

David

Dr David Bruce"

DSC CLANCY is now waiting to hear of the test results.
